

TM-25

NEW **Theramark**

Theramark™ markers stay securely where you put them throughout the entire treatment process. They are repositionable during the initial set up, giving you time to get the markers in just the right spot. The adhesive bonds stronger as time goes on. Theramarks adhere directly to immobilization masks without having to use tape. Only for use on immobilization masks. Not medical grade adhesive. Adhesive made with natural rubber latex.

Packaged with 110 markers per box.
